DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I, claim 1, in the reply filed on 9/27/05 is acknowledged. The traversal is on the ground(s) that the method and apparatus are the same as amended. This is not found persuasive for reasons already of record, and also because they are separately claimed, and the method specifies catalytic decomposition while the apparatus specifies catalytic burning.

The requirement is still deemed proper and is therefore made FINAL.

Specification

2. The disclosure is objected to because of the following informalities: Fig. 11 is not included in the Brief Description of the Drawings.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and

Art Unit: 1754

distinctly claim the subject matter which applicant regards as the invention.

Claim 1, lines 9-10, "said exhaust and syngas" lacks antecedent basis.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Maunula US 2002/0054843 in view of Buchanan et al. US 5,591,417.

Regarding claim 1, Maunula '843 discloses a method for purifying exhaust comprising contacting the exhaust with a unified NOx adsorbent catalyst and particle separator system (see 0012), wherein the system comprises a ceramic having a honeycomb structure (see 0047), and regenerating the system (see 0048 and Example 1).

Maunula fails to disclose regeneration with syngas.

Art Unit: 1754

Buchanan '417 discloses regeneration with syngas (see column 7, lines 1-11).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the syngas regeneration of Buchanan in the exhaust purifying method of Maunula because Buchanan discloses the syngas regeneration for use in a process for removing NOx (title), which permits a reduction in combustion air and temperature, and improves fuel efficiency and NOx reduction (see column 3, lines 15-21).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cohen et al. US 5,294,409 discloses a regenerative system for the simultaneous removal of particulates and the oxides of sulfur and nitrogen from a gas stream comprising an acceptor sorbent, porous carrier, and a filter (see abstract and Examples).
